2.3 Informations complémentaires

2.3.1 Ansible

La version d'Ansible requise pour l'installation de la solution logicielle est au minimum la version 2.9 Merci de vous reporter à la documentation d'installation pour plus de précisions.

2.3.2 OS

Centos 7, Debian 11, Debian 10 et Alma Linux 9 sont supportés dans cette release comme OS d'installation des composants de la solution logicielle.

2.3.3 Limitations

2.3.3.1 Limitations liées au logging

Selon le système d'exploitation utilisé, la configuration par défaut de rsyslog peut le faire *logger* l'intégralité des logs *INFO* (et plus), y compris les logs vitam, dans le fichier de log central du système. La taille de ce dernier peut alors devenir problématique. Il convient dans ce cas d'exclure la *facility local0* (facility syslog utilisée par VITAM) de la règle de log par défaut de rsyslog.

2.3.3.2 Limitations liées au SSL/TLS

L'activation du chiffrement SSL avec authentification client sur les flux à destination des offres de stockage peut avoir un impact sur les performances (problème de réutilisation des connexions TLS entre 2 appels). Seule la version 1.2 du protocole TLS est supportée.

2.4 Montées de version

Note: Merci de consulter le Document de Montées de Version pour toute montée de version.
